

CPT202 Software Engineering Group Project

Software Requirements Report **Web-based Specialist Consultation Booking System**

Group Number: 22

Student Name: Qi Cao

Student ID: 2360908

1 Project Identification

1.1 Project Title

Web-based Specialist Consultation Booking System

1.2 Identified Project Modules

- User Auth & Access Control
- Specialist Profile Management
- Availability & Schedule Management
- Booking & Appointment Flow
- Search & Discovery
- Booking Status & Lifecycle
- Client Dashboard & History
- Admin Panel

1.3 Assigned Module

Admin Panel

2 Primary Stakeholder and Operational Contexts

2.1 Primary Stakeholder

Administrator(Operations Manager), who is responsible for managing the user accounts, monitoring the booking records and operating the system.

2.2 Operational Contexts

The administrator needs tools to track user behaviors and oversee overall system performance. On the admin panel, the administrator can manage user accounts and monitor booking records. In addition, the administrator can create, update, and delete expertise categories. This ensures specialists can be correctly categorized and easily searched. Moreover, the admin panel allows the administrator to post system announcements to inform users about system updates and other important information.

3 Pre-Groomed PBIs

3.1 PBI 1: Track System Activities

3.1.1 User Story

As an administrator, I want to view system activity logs so that I can track system operations and monitor users' behaviors.

3.1.2 Acceptance Criteria

1. Record System Actions
 - **GIVEN** an action of users is performed,

- **WHEN** the action is completed,
- **THEN** a log entry should be created with timestamp and action details.

2. Display Activity Logs

- **GIVEN** I am an administrator,
- **WHEN** I access the log page,
- **THEN** all recorded actions will be displayed in time order.

3. Restrict Unknown Log Access

- **GIVEN** I am not an administrator,
- **WHEN** I attempt to access logs,
- **THEN** access should be denied, and the logs cannot be displayed.

3.2 PBI 2: Monitor Booking Records

3.2.1 User Story

As an administrator, I want to view and monitor all booking records so that I can ensure correct system operations.

3.2.2 Acceptance Criteria

1. Display Booking Records

- **GIVEN** I am an administrator,
- **WHEN** I access the booking monitoring page on the admin panel,
- **THEN** I should see the list of booking records with customers, specialists, booking time, and booking status(Pending, Confirmed, Cancelled, Completed).

2. Filter Booking Records by Status

- **GIVEN** I am an administrator,
- **WHEN** I apply a status filter when viewing booking records on the admin panel,
- **THEN** I should see only the booking records that match the selected status. If no records match the selected status, the system should display a message indicating that no results are found.

3.3 PBI 3: Manage User Accounts

3.3.1 User Story

As an administrator, I want to view and manage user accounts so that I can monitor system users and manage their access to the system.

3.3.2 Acceptance Criteria

1. Display User List

- **GIVEN** I am an administrator,
- **WHEN** I access the user accounts page on the admin panel,
- **THEN** I should see a list of all users with their roles and account statuses.

2. View User Details

- **GIVEN** I am an administrator and I select a user,
- **WHEN** I open the user profile,
- **THEN** I should see the user's detailed information, including user's name, user's identity(specialist or customer) and user's status.

3. Disable User Account

- **GIVEN** I am an administrator and I want to disable a user account,
- **WHEN** I click the “disable” button on the page,
- **THEN** the user should no longer be able to access the system.

4. Enable User Account

- **GIVEN** I am an administrator and a user account is disabled,
- **WHEN** I click the “enable” button on the page,
- **THEN** the user should be able to access the system again.

5. Restrict Unauthorized Access

- **GIVEN** I am not an administrator,
- **WHEN** I attempt to access user management features,
- **THEN** access should be denied.

3.4 PBI 4: Manage System Announcements

3.4.1 User Story

As an administrator, I want to publish system announcements so that I can inform users of updates and other information.

3.4.2 Acceptance Criteria

1. Create System Announcement

- **GIVEN** I am an administrator and I want to release an announcement,
- **WHEN** I create and release a new announcement on the admin panel,
- **THEN** all logged-in users should see the announcement on their dashboards.

2. Delete System Announcement

- **GIVEN** I am an administrator and an announcement is no longer needed,
- **WHEN** I delete the announcement on the admin panel,
- **THEN** the announcement on users’ dashboards disappears.

3. Update System Announcement

- **GIVEN** I am an administrator and an announcement needs to be update,
- **WHEN** I update the announcement on the admin panel,
- **THEN** the original announcement is replaced by the new announcement on users’ dashboards and marked as “Unread”.

3.5 PBI 5: Manage Expertise Categories

3.5.1 User Story

As an administrator, I want to manage expertise categories so that specialists can be properly classified and users can search for services more effectively.

3.5.2 Acceptance Criteria

1. Add Expertise Category

- **GIVEN** I am an administrator,
- **WHEN** I create a new expertise category on the admin panel,
- **THEN** the new category is generated and should be available for specialists to select and the user to choose.

2. Update Category Information

- **GIVEN** I am an administrator and an existing category needs to be updated,
- **WHEN** I modify the information of the category on the admin panel,
- **THEN** the updated category should be reflected across the system.

3. Delete Category

- **GIVEN** I am an administrator and a category is no longer needed,
- **WHEN** I delete the category,
- **THEN** the category should disappear on users' dashboards. If the category is associated with any specialists, the system should display a warning message to the administrator to prevent deletion.

4. Restrict Unauthorized Access

- **GIVEN** I am not an administrator,
- **WHEN** I attempt to manage categories,
- **THEN** access should be denied.

4 Collaboration (Peer Review and Feedback)

4.1 Peer Review

- **Peer:** Kan Liu 2362244

- **Feedback Provided to Peer:**

In general, you have developed a clear understanding of Scrum principles and can clearly translate the user requirements into several PBIs. For each PBI, you can describe the user story and correctly use the GIVEN-WHEN-THEN format to make acceptance criteria. However, you only consider the situation that register are specialists. I suggest that you may add an acceptance criteria for PBI 1 that also covers the case where the registered user is a customer.

4.2 Feedback Received:

You understand the scrum process and use the correct Given-When-Then format and your PBIs are well-structured. But for the 'Manage System Announcements' part, you mentioned that the original announcement is replaced by the new one. I suggest that adding a new Acceptance Criteria that can display something like "Unread" to ensure it can notice the users that it changed. Otherwise, when something similar notice happens, the user may get confused with it.

5 Reflection on Learning

During this coursework, I developed a deeper understanding of the Scrum framework and realized the importance of collaboration and effective communication among teammates. For example, I mistakenly included a pricing function in my module. However, after discussing with my teammates, I recognized this error and removed this function accordingly. Moreover, I recognized that Scrum is not only a process of dividing tasks, but also a process filled with continuous feedback, discussion, reflection, and improvement among team members.

While designing the system modules, I learned how to break down a huge and complex system into several small and manageable modules by analyzing and refining system requirements. In addition, I improved my ability to translate user requirements into well-defined PBIs, which involved formulating user stories that clearly capture user needs and expectations, as well as applying the GIVEN–WHEN–THEN format to construct reasonable acceptance criteria.

The feedback pointed out that I need to add an acceptance criterion for PBI 4 to remind users of updated announcements. In response, I introduced an “Unread” mark to indicate newly updated announcements. This feedback helped me realize that I had overlooked user notifications and made my PBIs more complete and clearer.
